

# COSMOSX

## White Paper 1.3

March 2022

## CONTENTS

1.	CosmosX introduction.....	3
2.	CosmosX NATIVE token.....	4
3.	Planets, Land Auctions and TOKEN LAUNCHPAD.....	5
4.	3D AI NFT.....	6
5.	AI Categories .....	7
6.	Blockchain agnostic / cross chain compatibility .....	8
7.	3D marketplace .....	8
8.	Rate to Earn.....	9
9.	Virtual Shopping Mall.....	10
10.	Virtual Cities .....	10

## 1. COSMOSX INTRODUCTION

Space themed metaverse open world, allowing users to interact, earn rewards and participate in new projects together.

Incentives for users to be part of the network. Creators can build and sell 3D metaverse assets for use in the platform.

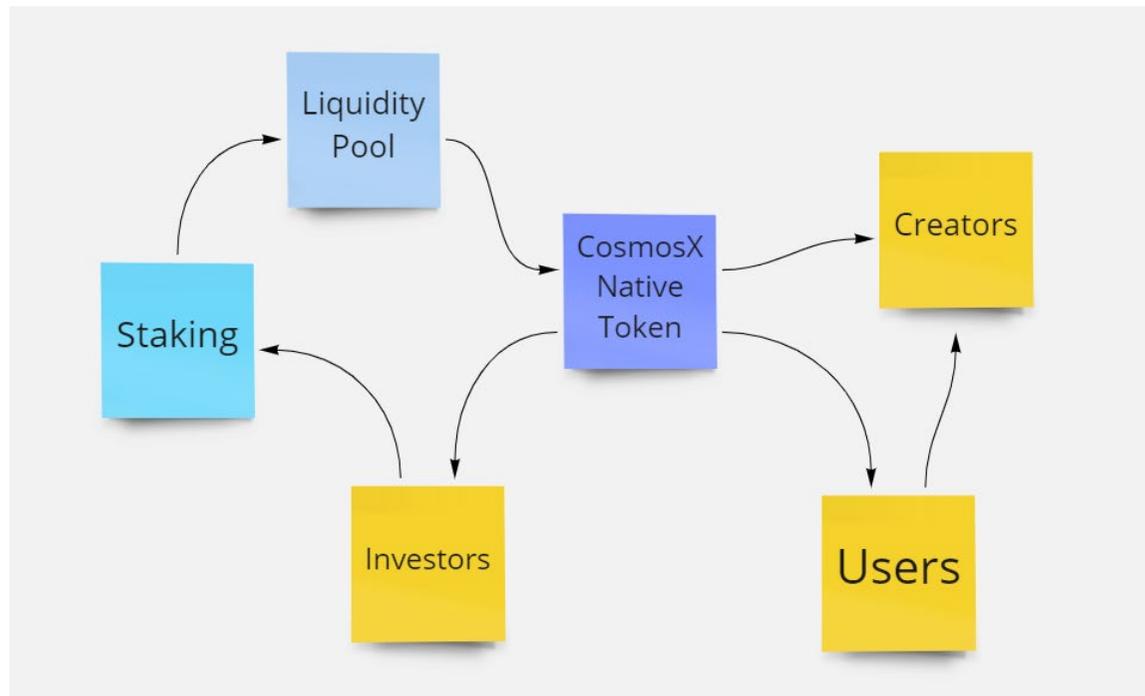

Advanced users can build and run their own AI and automation, facilitated by NFT ownership and smart contracts

Native token, 3D NFT marketplace, multiple X to earn systems

B2B2C - Make a business in a virtual shopping mall

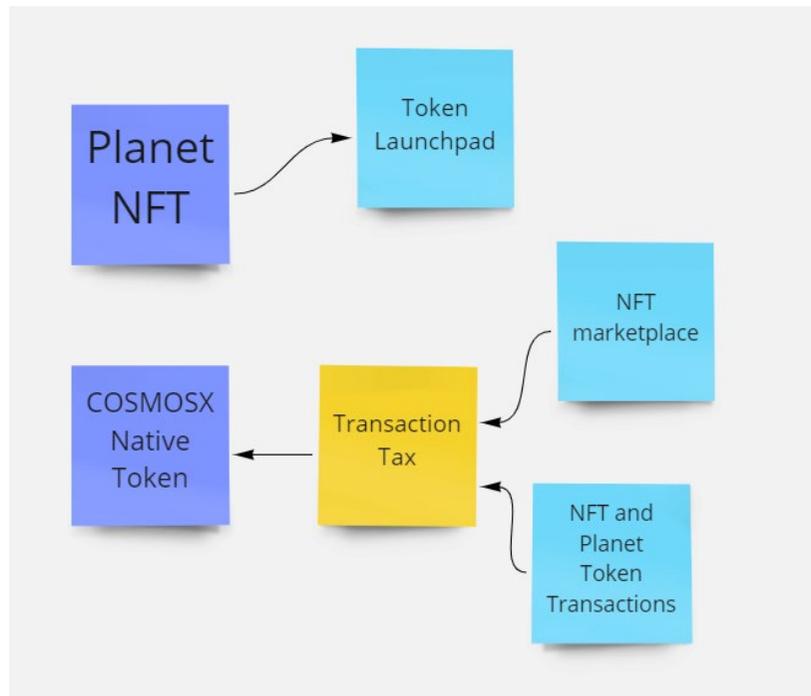

## 2. COSMOSX NATIVE TOKEN

The Cosmosx token is helping architect a central way of rewarding and incentivising people at each stage of their journey. For being on the network they automatically receive the Cosmosx token. Through the X to earn methodology people can participate in many ventures such as “learn to earn” and “play to earn”. Using smart contracts X to earn DAOS can be setup within cosmosx. This encourages synergies between users, content creators and investors. Investors providing liquidity will also be rewarded.

## 3. PLANETS, LAND AUCTIONS AND TOKEN LAUNCHPAD

3D NFTs will be sold for individual planets, owners of which will be able to launch their own token. On these planets, buildings and assets can be created and sold as NFTs. The CosmosX NFT marketplace will be used in these transactions, as well as token transactions. All transactions have to pay a tax using the cosmosx token.

## 4. 3D AI NFT

The utility of AI-NFTs will be unlocked in the CosmosX metaverse.

NFT collections will be launched showing various categories (listed below). After buying these 'AI-NFTs', they are able to be used in the CosmosX network to provide AI capability linked to the category of the NFT.

(Defi Example)

## 5. AI CATEGORIES

The AI NFT functional categories and unlockable features are below. All categories include a recommendation engine, able to detect history for that user and recommend relevant items. Each category includes specific functionality that enhance the value of the NFT.

## 6. BLOCKCHAIN AGNOSTIC / CROSS CHAIN COMPATIBILITY

Cosmosx will offer multiple wallet support allowing users holding various currencies ways to connect to the network, and exchange tokens easily. Through the use of existing cross chain swap projects we will be able to quickly allow token conversations at the entry stage to the platform, allowing users holding many types of wallet to access the system.

## 7. 3D MARKETPLACE

CosmosX will support an interactive and immersive 3D marketplace where people can move around, view NFT's from all directions, buy, sell and mint new NFT's. The marketplace will also support standard 2D NFTs as well. In future this will be expanded to show physical items for sale that would benefit from a 3D experience.

8. RATE TO EARN

Through the “X to earn” methodology people can participate in many ventures such as learn to earn and play to earn. The first such project to be launched will be a rate to earn system.

The initial data that users will rate on will be public NFT information from existing blockchains and marketplaces including OpenSea. It will later expand to token projects, and websites within each category.

The competition will be run each week and encourage people to come back and participate on a regular basis. Through a staking plan users can buy tokens and stake them on a gallery / project within a category. Depending on the proportion of their stake compared to the overall staked for a project they will receive a percentage of the available prize funds. The winner will be a random choice of the top 10 votes.

The formula below shows the formula for a given user if they win the competition:

$$Prize = \frac{S}{T_s} \times T_p \times C_p \times U_p$$

S = Amount staked by a user on a particular gallery/NFT within a category

T<sub>s</sub> = Total Amount staked on the category.

T<sub>p</sub> = Total Prize Fund the total made up from commissions each week from token swaps. The stake is never lost, so it's not a gambling competition.

C<sub>p</sub> = Proportion of prize funds assigned to each category. If there are 5 categories there will be 20% assigned to each one as an example.

U<sub>p</sub> = Proportion of prize going to the owner and voter – for example the owner of the NFT gallery may receive 20% of the prize, the person winning the voting competition may earn 80%

## 9. VIRTUAL SHOPPING MALL

CosmosX will facilitate a “director’s club” subscription to allow users to create and run their own business in the metaverse. As well as allowing existing real world businesses to bring their presence inside the metaverse. Companies can hire users to work inside their shop fronts to talk with customers, as well as utilize the cosmosx virtual AI assistants to guide the customers around the store. Businesses can get a global reach 24x7.

Also on offer will be the ability to white label the 3D virtual store front and place on other websites.

## 10. VIRTUAL CITIES

Get a chance to buy or rent an apartment near your favourite influencer by buying on a planet they occupy. This could create a synergy between other people in the same network to sell products and services in a nearby business.

Bespoke designs allow for creativity in plot design for example piano shaped swimming pools, and exclusive designs which matches the owner’s identity, interests or lifestyle. A collection of virtual interior assets will be available to purchase.

Virtual advertising will also bring income for the owners of that space.

Travel in style with a virtual car and space ship to travel between planets.
